

Trisetum youngii

Current Threat Status (2012):

Not Threatened

Distribution:

Endemic. North Island, uncommon, on Mt Hikurangi, Ruahine and Tararua Ranges. South Island uncommon, along the main divide and to the west to Fiordland.

Habitat:

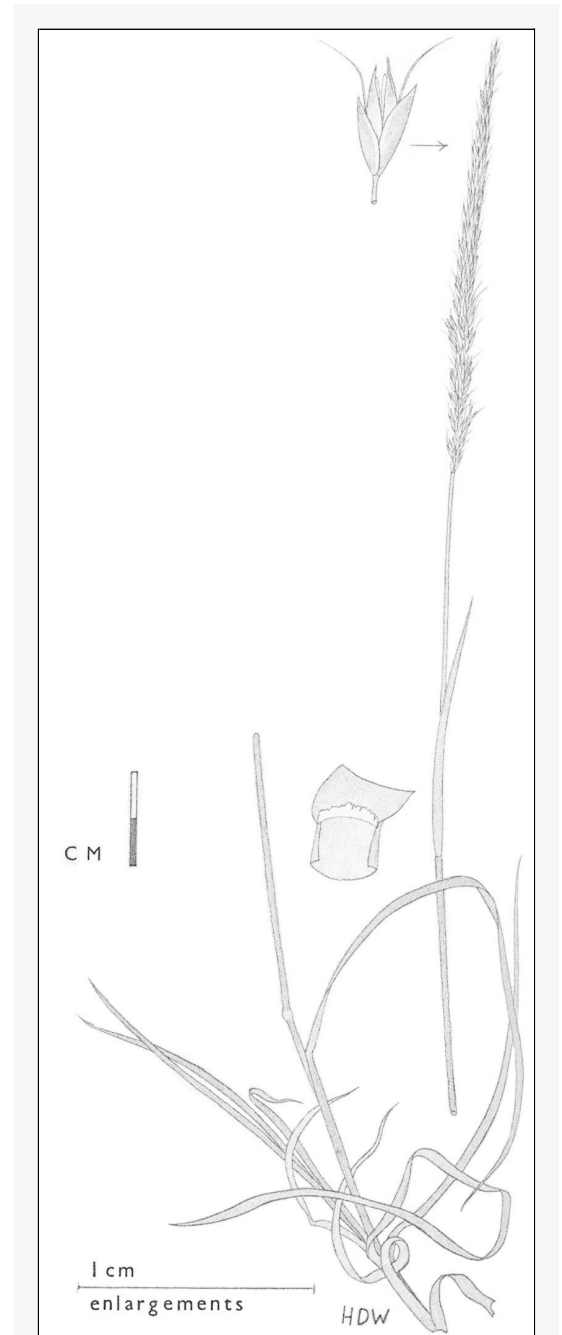

Subalpine to alpine (760 - 1980 m) grassland, grey scrub and forest margins, where it often found on boulder falls or slip scars. Usually in shady, damp sites.

Threats:

Not Threatened
