

Trisetum spicatum

Current Threat Status (2012):

Not Threatened

Distribution:

Indigenous. In New Zealand known only from the South Island where it grows in high alpine situations mainly east of the divide. Also on the Chatham, Auckland and Campbell Islands.

Habitat:

The mainland form grows in subalpine to alpine vegetation, typically in open rocky ground in fell field, herbfield, scree, rock outcrops, cliff faces or tussock grassland. Often found growing with *Koeleria cheesemanii* (Hack.) Petrie. The Chatham Island variant grows in dune swales. The subantarctic variant grows on peat and in rock crevices at sea level.

Threats:

Not Threatened
