

Acacia decurrens

Common Name(s):

green wattle

Current Threat Status (2009):

Exotic

Habitat:

Waste places and dry hillsides.

Features:

Small to large tree, stems sparsely hairy. Leaves 2-pinnate with widely spaced, dark green pinnules. The inflorescence consists of numerous bright yellow globose heads arranged in racemes, more or less equal in length to the leaves. The seed pod is glabrous and straight, up to 100 x 8 mm.

Flowering:

July, August, September.
