

Bambusa glaucescens

Common Name(s):

bamboo

Current Threat Status (2009):

Exotic

Habitat:

Terrestrial.

Features:

Clump-forming bamboo, forming dense clumps but not running extensively. Stems usually 3-5m x 1-2 cm diameter and at least some stems striped yellow and green. Culm sheaths with black hairs that are soon shed (caducous). Several branches at each node. Leaf-blade linear-lanceolate, 6-15cm long 0.6-1.5cm wide, glaucous, hairy underneath.
