

## *Bambusa oldhamii*

### **Common Name(s):**

Oldham's bamboo

### **Current Threat Status (2009):**

Exotic

### **Features:**

Clump-forming bamboo, forming clumps but not running extensively. Stems usually 10-13m but can be taller and 4-8cm in diameter. Culm sheaths very large and on bigger shoots may have black hairs that are soon shed (caducous). Several branches at each node, usually >1m long. Leaf-blade oblong-lanceolate, 8-18cm long 1.5-3cm wide, green and not hairy.
