

Allisoniella recurva

Common Name(s):

Liverwort

Current Threat Status (2009):

Naturally Uncommon

Distribution:

Endemic. North and South Islands.

Habitat:

Terricolous in damp sites, such as near waterfalls, on moist clay banks, on tarn margins and within seepages, where it grows threaded amongst other vascular plants and mosses.

Threats:

Recent field surveys have shown that this species is both biologically sparse, naturally uncommon and under no clear threats as such it has recently been listed as 'Naturally Uncommon' (see Glenny et al. (2011))
