CASCRI EDOTAVO COUNTO DECEMBRO (CHANDOCUD)	GRID								
	### N 159 665680 ory prehistory water supply								
LOCATION Castlepoint is on the Wairarapa Coact, 48 km east of Masterton.	AREA hatex 59.7 L.D. No. Section 1047, Block X Castlepoint S.D.								
ACCESS By road from Masterton, to the end of Jetty Road at Castlepoint township, then informal access across the sand. There is a boardwalk from Jetty Rd to the light	some to the state of the state								
of the bay. The reserve consists of the Castlepoint promontary at the south end of the bay. The northern- ost land tip features the Castlepoint Lighthouse. The limit	CONTROL Masterton County Council								
stone ridge then dips dow to form a linear reef which shelters a tidal lagoon. The entrance to this natural harbour is at the southern end at the base of the hill and bluffs called The Castle (162m). Sand overlies rock between the mainland and the	GAZETTED 1876, 1898, 1957, 1971 RESERVED								
lighthouse promontory to form the tombola. Low scrub, tussock and herbfield vegeta- tion are distributed patchily on land surfaces; exotics are planted on western dunes	HISTORY								
SURROUNDINGS The land to the west of the reserve is the pasture covered hillsides of Castlepoint Station. Castlepoint beach sweeps around to the west of the lighthouse	AIR PHOTO SN 8224 dare 2.5.83.								
GEOLOGY The only exposed beds of fossiliferous limestone on the Wairarapa coast.	nearby town Masterton nearest reserve Pongaroa S.R.								
The coastal hills are a fault complex consisting of limestone breccia, sandstone beds of coquina limestone and minor conglomerate, and mudstone/siltstone.	public road Musterton-Castlepoint Road see (km) 0								
SPH Mudstone with mentonitic clay, limestone and banded sandstone.	ALTITUDE might 0-163m								
Margarion of an John Monetoni of an James Whate	RAIN mm - 88 903 (approx)

- The Castle was first seen and named by Captain Cook, 11 February 1770. In 1843 William Colenso named the lagoon "Deliverance Cove" after landing there in a storm. Early farming concerns used Castlepoint as a wool trading port. Now the harbour is used for commercial and recreational fishing and pleasure boating. The lagoon provides anchorage in NW winds but has limited protection in southerlies. At present ten commercial boats operate from the reserve.
- The reserve is regularly visited by educational study groups for a range of subjects, in particular geology, biology and archaeology. The public facilities provided are toilets, a path along the sand-dunes to the reef, and the boardwalk across the tombola to the Lie thouse which is maintained by agreement of the Ministry of Transport.
- 3. The Castle is subject to severe erosion where the more stable beds of sandstone and mudstone have been crushed and folded next to the limestone (excellent examples of bedding are exposed). The erosion problem has been increased by overuse by visitors and removal of vegetation. The area has been used for grazing. Excessive use has also promoted erosion along the top of the reef. Trail bikes in the sand dunes have accelerated de-vegetation and sand erosion there also.
- 4. The reserve is the type locality for the rare species Senecio compatus, as yet not found elsewhere. Other plants of interest here are Coprosma accross (less abundant due to sand habitat modification), Tetragonia trigyna (NZ coastal spinach) and the native carrot Daucus glochidiatus. The seaward slopes have never been modified due to their steepness, so are botanically the most interesting.
- 5. 38 species of birds have been recorded at Castlepoint including 20 native sea birds and 6 native land birds. Red-billed Gull, White-fronted Tern, Black-backed Gull, Black Shag and Blue Heron from colonies on the reef and cliffs.
- 6. Castlepoint is the most popular resort beach on the Wairarapa Coast with high numbers of visitors during summer. In late March the Castlepoint Races are held on the beach, an annual event that was first held 40 years ago. The most popular activities are fishing, swimming and surfing, none of which are recommended along the reef due to very dangerous sea and wind conditions. Since 1949 there have been 33 drownings recorded.
- 7. The shelter-belt of pine trees along the western boundary was planted before it was realised permission was required from Lands and Survey to do so. Although it provides a pleasant picnicking and camping area, it is not in accordance with scenic reserve policy.
