Site description:

This is an area of cleared land, pine plantation and some small bush areas above the W.R.C access road. The native vegetation that remains is in the river bed and in a couple of fenced areas. The riverbed has a lot of exotic species including silver poplar, blackberry, willow, broom and various grasses. There is a good deal of regeneration under the poplars, particularly five finger (*Pseudopanax arboreus*).

The most interesting area was a stand of tall kanuka (*Kunzea ericoides*) with an interesting grass flora and a small watercourse with some more moisture loving species.
