✓	✓	1. Coastal rock platform.  Contains tidal rock pools with characteristic exploded shoreline communities with green, brown and red algae, chitons, limpets, paua, crabs, barnacles, sea anemones, polychaete worms, prawns and cock-a-bullies.  Small areas of salt meadow with vegetation dominated by <i>Selliera</i> , <i>Triglochin</i> , sea primrose, <i>Scirpus cernuus</i> and <i>Lilaeopsis</i> .  Scattered weeds in the vicinity of the road.  A large boulder in the reserve supports small clumps of silver tussock, ice plant, shore groundsel, and <i>Asplenium terestre</i> ssp <i>maritimum</i> .							100	0.62	✓

<b>CONCLUSIONS and RECOMMENDATIONS</b>															
Closest seal colony to any major town or city in New Zealand. Contains typical coastal rock communities.															
The reserve should be enlarged to encompass much more of the coastal vegetation. Vegetation of the coastal cliffs is unrepresented in the Wellington mainland reserves.
